Understanding the Variable Torque System (VTS)

The VTS feature in the Citroën C2 is a sophisticated engine management system that adjusts torque output based on driving conditions. This results in:

- Improved fuel efficiency during city driving.
- Higher torque for quick acceleration when needed.
- Reduced engine wear due to optimized power delivery.

When you refer to the manual's VTS section, you'll find explanations on how the system behaves and how it interacts with other vehicle systems such as traction control and ABS.

Safety Features Explained

Citroën equips the C2 VTS with a suite of safety technologies. Below is a quick rundown of what each system does and how to use them.

ABS prevents the wheels from locking during hard braking, allowing you to maintain steering control. The manual explains how the ABS warning light works and when to seek service.

Electronic Stability Program (ESP)

ESP monitors steering input, wheel speed, and other parameters to maintain vehicle stability. It automatically applies brakes or adjusts engine output if the car starts to skid.

Traction Control

Traction control reduces wheel spin during acceleration, especially on slippery surfaces. The manual includes a troubleshooting guide if the traction control warning light appears.

Airbag System

Front, side, and curtain airbags provide protection in the event of a collision. The manual details proper seatbelt usage and child seat placement.
